

# VEX Robotics Poster Design

Created by: Iris, Alice, Angeleslie, and Erinne

VEX IQ: Team 8111A

Location: Dodson Middle School

This poster advertises the VEX program where young students can have fun while also learning about robotics and computer science. The poster highlights the goals of VEX as well as associating the things students can achieve through VEX: interacting with your team, growth in knowledge, and a love for competition.

This poster was designed in a way to visually attract students, mentors, or supporters to want to know more about VEX. Our team wanted to give descriptions and personal statements about VEX that would interest and inspire young students to be a part of this program. It delivers a message to students on what they can be a part of, and to mentors on how they can help students grow in the science field, and themselves. We hope that our flyer can captivate the attention of many people to find them wanting to join the VEX program.
