

Part 2: Camp

3 hrs per week for the past 5 months

YESSSSS, we have girls that joined

This is where we grouped them into teams and committed to 3 hrs per week for 5 months. Some of the teams blew us away. They build their clawbots and learned how to program them in less than 6 hrs.

They wanted to compete, which was not initially planned in our project. We asked our coach and within one week they were registered officially.

Thus far 2 Teams have been to a competition and their main Debut is February 4th at a local tournament where all 3 teams will compete.

Not all teams wanted to compete, for these students it is a safe place for them to come after school and tinker.

We can do it!
