

## **VEX Recruitment Poster: Why VRC is for You!**

Team Number: 5776K (DVHS Robotics)

Students who Participated: Adarsh Sheth

Team Location: Dougherty Valley High School  
10550 Albion Road, San Ramon, CA, 94582

---

When the online challenges were released, our team looked over them together, and each member chose one that interested them. It could have been one of their talents, a skill they were trying to improve, or a challenge they found intriguing. I chose this online challenge because it fits my talents, and I wanted to advertise the benefits of VEX Robotics to students, coaches, and supporters.

I started VEX robotics six years ago and am in a club founded 15 years ago. With such a deep history, our club has maintained a strong sense of dedication toward learning and teaching robotics in our community. Members of my and other competitive teams in our club work on robots for our respective teams, mentor younger students in the novice program, teach students at the summer camp, and volunteer at our annual tournament. If there is anything I've learned about VEX, it is that there are countless interpersonal and technical skills that one can learn from any of its programs.

My passion for digital art also inspired me to work on this online challenge. I used a theme from canva.com to develop this poster, which included my favorite features of VEX. For each of the skills, I elaborated on their benefits using my personal experience and used pictures from previous seasons of my club. I used red, blue, and black as the color scheme for this design since I wanted to represent VEX and DVHS Robotics colors. The subtitle says "For Students • Coaches • Supporters" to explain that VEX is for many people. Students can develop extensive STEM experience, adults can give back to the community, and companies can support VEX with sponsorships to allow more students to participate. Overall, my poster represents competitive, educational, and social aspects of robotics to highlight the benefits of joining VEX.
