I choose engineering because it is a hard and challenging job . My involvement in competitive robotics helps me in this field because engineering our robots designing, and improving our robot is similar to what engineers do. To be an engineer the required skills are technical knowledge, creativity , innovation , leadership and many more. I believe in the next ten years engineering would be different because of the the new and improved tools that they use and the technology they will use would very different. Alexander Graham Bell was an engineer who invented the telephone. He has inspired me to work hard and never give up. He cofounded a telephone and a telegraph company.
