

We chose this photo because it has some of the many equations we need to be successful with our robot design and teamwork and we think it clearly describes how we feel about robotics. Part of why we love robotics is because we love the thrill and excitement of going to competitions and seeing our robot work well and working as a team this is represented by the zig-zag line going across the heart in the center because it looks like how a heartbeat is shown on a heart rate monitor when there is a heart rate spike.
