

Real Estate Drone Photographer, Videographer

By: Colin, Kaileb, Jonah, Sebastian

Team Number: 54705A

Location: Alexandria, LA 71302

The purpose of a real estate drone photographer/videographer is to take pictures and photos needed for a home starting from pre-production including lighting the house to post-production and editing the imagery to put in the listing.

Qualifications:

- You must be organized and ready to learn new skills.
- You must have a car with a current and legal driver's license.
- You must ALWAYS be courteous for customers and be prompt adherence to appointments.
- We will provide training to get you on the same page with our process and you will demonstrate real estate photography expertise by completing a practice complete package.
- Photography: 1 year. (Required)
- Driver's License. (Required)

Benefits:

- Pay varies between \$18-\$50/hr depending on experience
- Huge advantage if you are already a licensed drone pilot as well per Part 107 of the FAA
- Pay: \$18.00 - \$30.00 per hour
- Professional development assistance
- 4 hour shift

Market Sixty Six is established to provide services such as photography, drone photography, highlight videos and virtual tours, as well as other additional products to enhance the sales of the listings more effectively. For this career, you will of course need a drone, a piloting device, and experience.

This is a lot of what goes on and the qualifications of this job. They are said to have a good eye for detail, they also know how to work with each other. These agencies open up to ANYONE who either has an eye or knack for photography. When being a real estate photographer of any kind what they are supposed to do is meet up with the clients they are going to be taking pictures for.

Editing and Videos

Next, they are supposed to help the homeowners achieve the best look for the pictures. The pictures don't have to all be frontal though, there are some backshots and side shots in there too. Also knowing that the qualities they need are ones that would enhance photography, they then have to edit all the photos that they have taken.

What they have to do

What they have to do is be able to make multiple shoots a week. They must have the mindset of a photographer, they also must know how to multitask. Also they have to be familiar with the Real Estate Background. What they have to do is also provide a lot of different views of what sources say the neighborhood that the house is in.

The Restriction

Those wanting to become a real estate agent pilot have to know where to fly. They also have to sign a waiver saying so. This is not a bad restriction, what this link takes you to is a site of drones. Because some people are going to have a budget for the type of drone with camera, or drone and to buy one that fits.

Why does this Matter?

The Aerial Drone Competition will prepare competitors for swiftly moving through and around houses for pictures, videos, and online tours. After all, a drone can't crash if it's trying to give a tour. There are many other qualifications needed to be a real estate drone photographer, but having experience with flying drones would *probably* be the most important part! In this career, swift movement and precise camera angles are key to getting a good day's pay, and the opportunities that open to us students vary depending on what they pursue. With us competitors pursuing the Aerial Drone competition, I think that our chances have increased greatly!

He is a real estate pilot. This second person view is showing the process of him taking one above the house.

Conclusion

Becoming an Aerial Drone Pilot early in life can really help you because you can eventually get a well paying, low hour job! The REC is preparing people like us to think using STEAM principles and exposing students to powerful solutions in the future. These principles can be used in the future for tons of things, like working as an Aerial Drone Pilot. These principles are used to create a fulfilling and exciting job for students around the world. This is all possible because of the REC that allows students from across the world to interact with the future using highly advanced drone technology!
