

Vex Robotics Poster

Presented by team 81101A - Restart - by Evie Ethan Max Dyaln Sam
Mankato Minnesota, Dakota Meadows Middle school

First I came up with ideas for how to design the poster (i.e title, headlines, how to organize the ideas, creative ways to use the space).

Next I mapped it all out in pencil making edits as I went to maximize the space given.

Then I went over all the pencil with a sharpie to make a crisp black outline on everything.

After that I filled in the different sections with descriptions of each job they correspond to.

I then added color and filled in the extra space with vex related graphics.

Finally I went over the lines that may have gotten muddied by paint and markers used for the colors to keep the poster looking nice and clean.
