

Team 12Z Loves Robotics!

By Maddy, Sophia, Tara, Avery, and Katie
Team 12Z, McLean, Virginia

This poster was very fun to create! As soon as we saw this challenge, our whole team agreed that it would be a perfect showcase of our skills and our team. To inspire others to join robotics, we wanted to share the bold, but true, statement that we love robotics. We have also included photos to show our team and our robot, so people can see the real results of hard work. The text shows what we've learned as a team and what we do everyday at practice. We have found that many people don't have an accurate idea of what goes on in robotics, so we are hopeful that this poster will show that. To create this poster, we started by finding a template that immediately sparked interest. After some planning, Maddy got to work putting everyone's ideas into the pre-created template. Once all the text and photos had been inserted, we all discussed what our aesthetic visions were. After a final discussion and edits to the color scheme, everyone was satisfied with our poster. We hope that this poster will inspire others to join robotics!
