Poster Design Challenge
By : Eden J. & Elizabeth C.
League City, TX

A Brief Description :

The Poster :

Our poster is centered mainly on the teamwork and community aspects of VEX Robotics. With many pictures of important times in VEX that felt more than a competition. VEX has helped us find our passions for robotics and engineering and we hope that others can find their passions through robotics as well.

The Design Process :

The pictures in the background are ones that our teams have taken over the past year and they showcase the community and passion that we all share for robotics. The words over the images are some qualities that we have gained from being in VEX robotics. We wanted it to be simple to understand the poster so we kept the VEX logo in the focal point (using the Fibonacci Sequence/Spiral) and provided a QR code to make it quick and easy to reach the website. Under the logo is also a statement "BE THE FUTURE" this is because robotics is training today's children to be tomorrow's leaders. We love the technical aspects of robotics but what really makes it a unique and special environment is the intelligent, innovative, and kind people that surround you, and that is what we wanted to show in our poster. So we encourage all those who can, to join VEX Robotics, and Be the Future.
