

BUILD YOUR FUTURE WITH VEX IQ ROBOTICS

Names of Students: Luke, Aaron, Eva

Team Number: 8390C

Location: Markham, Ontario, Canada

Our poster is used to demonstrate the long-term outcome of robotics and the benefits and skills you are able to gain along the way. It incorporates the VEX IQ code structure, an essential ability that will be taught in robotics. The main objective is to allow people to understand the skills you could learn within the genres of robotics and skills needed in future tasks. Before our team created this, we went through multiple ideas which conveyed many different styles of how we want to spread this message. In the end, many possible courses of action were combined into one whole where each component was able to stand out and send a significant message. After this piece was drawn on a digital arts app, our team took feedback from peers and teachers. We were shown where we could improve and we were guided along the process of making this project come together.
