ABOUT OUR TEAM

We are 74177W: Purple Platipie. Some of us have previously been in VEX IQ Robotics for multiple years, qualified for States, and even qualified for Worlds. On the other hand, some are just starting this year. However, no matter how experienced the members are on the team, we all collaborate effectively with each other.

POSTER AND DESIGN PROCESS

First things first, I knew that I had to know every single part of information, rules, and requirements of this challenge. Once done reading the about the challenge, I moved on to step two. Knowing that this poster was supposed to persuade different people to join VEX, I went around asking people why they wanted to join and how it benefits them. Common answers included learning how to program, have better teamwork, build, patience, and most importantly, to have fun! These were all factors I knew to include in the poster. Next, I brainstormed and played around with Canva to find a formal, yet appealing layout for the poster. Finally, I made sure everyone on my team approved the poster and that it properly conveyed the message of why to join.
