

Vex Photography Challenge
2022-2023

In vex, angles are seen everywhere. With this image, I want to show that angles are the primary use to building our robot to function correctly. Our robot would not work if our angles were not right. Our flywheel and conveyor belt are at a perfect angle where our conveyor can pick up the disk from the floor, then bring it up to the flywheel, where the flywheel can shoot the disk into the high goal in this year's game. With the right angles, our flywheel, conveyor, and other parts of the robot work correctly.
