*Reflections in a Robot's Brain*

Emily Joy McCasland

768822C

Miami Valley Christian Academy, Cincinnati OH

I chose this picture because I felt like it accurately described the way that the robot's brain calculates math problems on an elite level. The way the robot stares into the mirror reflects the amount of effort it is implementing. When you are gazing at the picture, we are trying to portray all the digital images that are floating around in a robot's brain. The way the robot's thoughts all work together creates a bigger picture. Just like the way an enormous math problem makes one solution in the end. In conclusion, mathematics and robot brains are similar in many ways.
