

# The Underestimated Potential of Geometry

By Amber and Adelyn, Team 65950B

Think about how robotics connects to the world. Some shapes showcased in our photo are triangles, hexagons, and circles in the gears, wheels, sprockets, and more. They are all so small but they are used in big things! Think about the creators of companies. Some companies started by friends started small and eventually made a big company. VEX IQ parts work together and create big things! Like how people groups together to make BIG COMPANIES!! The VEX IQ parts can create something spectacular and BIG! Our picture represents teamwork! If small parts work together, they can be something really big.
