Blue Heat

Wooster High School

Participants: Antonio, Gianni, Josh, Silas, Will, Jeremiah

Our Poster has a simplistic design, we felt like if the poster had too much going on, it might distract from the main idea. On the bottom right we added a picture of a previous iteration of our robot to signify the type of building we do. While on the left we added a QR code that gives easy access to the vex website and forums. At the top we used the Vex Robotics logo and underneath we added a custom catchphrase/slogan to show that this program can positively affect the readers life.

We created this poster using canva as it is a free option comparable to photoshop. We did research on previous winners and got some inspiration hence the QR code. We then found a background we thought looked cool and a color scheme that best represented VEX Robotics as whole. We decided to use basic and quick information in order for people to gain an intrest with minimal time invested. These are the steps we used in order to develop the best poster.
