Clubs and electives are great ways to get involved in STEM from an early age. Taking part in these opportunities offers new experiences that cannot only strengthen your education but your team working skills as well. For instance, many projects force you to work with others to develop a solution to a modern day problem. My poster design, VEX Workspace, illustrates the busy workspace of a robotics' team. It takes hundreds of parts to engineer a VEX robot, just like how it takes an entire team to overcome a conflict. Being able to work with others is essential to succeeding in the STEM field because every person has a role in the same way that each individual piece plays a part.
