Alabama

To decide on a design for our poster, we were inspired by a shirt that one of our teammates owned that featured a flowchart with the question "Is That a Unicorn?" We decided to use this idea as the basis for our design, and began by creating a prototype to help us determine the specific questions we wanted to ask and how we wanted to structure the flowchart. We started by making the bubbles and robots that would be featured on the poster, and then added the refurbished questions and the arrows with "yes" or "no" responses. Next, we needed to find a way to communicate whether robotics was a good fit for the reader, but if robotics wasn't for them that it was ok and they can cheer us on instead. Finally, we created a title page and a description page to provide more information about the poster. Overall, this process helped us to create a clear and visually appealing design for our poster.
