VRC High School Photography Challenge

Title: Tensegrity
Team Member: Lauren R.
Team #: 1469A

The image seen in this submission is of a Tensegrity structure made entirely out of VEX components. This is a demonstration of an evenly balance symmetrical floating structure and is a reminder of one of the core principals we use when it comes to building a robust robot. That principal is focused on creating symmetry at the base to form a strong foundation for building upon.
