

Houston,  
we have found a new planet.

# Design process

1. Download vex robotic and vex robotic competition 2023 logos from the official website, and place the vex robotic competition 2023 logo in a prominent position in the center.
2. Download the Vector file of 9 planets from freepik, and then arrange them into 10 planets. The 10th planet is my theme, so it is placed in the center and enlarged. Arrangements and lines are drawn using Adobe Illustrator.
3. The parts of the vex planet are from the flip build instructions PDF, opened with Adobe Illustrator, and find out the part diagram that I need to combine into the planets.
4. There are a lot of circles in the rocket map after I googled it, but after I edited it with photoshop, the effect was very unsatisfactory, so I referred to the image file and use Adobe Illustrator to draw.
5. The flame of the rocket is modified after downloading the Vector file from freepik.
6. The photo of vex robotic is taken from the flip build instructions PDF.
7. The planet and starry sky map in the background is a vector file of the planet, which is color-graded with light in photoshop.
