THE PILLARS OF INNOVATION

TEAM: 11196X

BY: TARUN N, HEMANG K, YASH S, RAFAY R

LOCATION: LONDON, UNITED KINGDOM

WORD COUNT: 100 (EXCLUDING TITLE PAGE AND
HEADING)

The Pillars of Innovation - Based in London. Snapped In India.

Mumbai International Airport is known for its intricate architecture. The wide pillar arches towering over travellers sheltering them from harsh environments. The monumental spaces created beneath 30 mushrooming columns are to calm the mind and the airy pavilions and show the traditional regional architecture. The geometric shapes and patterns in this airport are distinct, with fractals and tessellations. The highlight is the array of rhombuses dotted across the pillars. These patterns and design will remind one of VEX Robotics. The innovation and the thorough patterns and consistency between different components of your robot match the ones shown in the airport.
