What is the Design Process? And What Happens After?

The Design Process is a process where a team constructs many ideas. These ideas are rated and combined to form one "perfect" idea. To decide the "perfect" idea they would have to use a decision matrix, and everyone would vote what would they agree is the best option

How STEM Related Jobs Use the Design Process

The Design Process is used in all S.T.E.M. jobs. Car Designers use this process by retrieving ideas from co-workers and implementing those ideas into the project. The ideas that have been said will go into a Decision Matrix which will be voted by all the members in that team.

How Does Apple Use the Design Process

For all the devices Apple makes, wouldn't be possible if Apple didn't use a Design Process. Apple Will have a meeting with all employees and start collaborating, they will give ideas which would go on the idea list and would vote if it is what they should produce next.
