

# Equality to all Genders

By Michaela C.  
Team 74177X

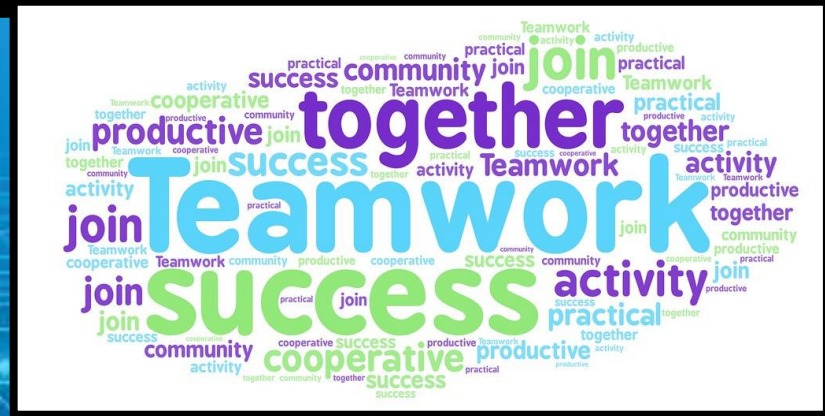

Pinecrest Sloan Canyon Middle School Henderson, Nevada

Word count:753

# Meet the team

6 of us, 4 boy, 2 girls, 1 team. We all want to qualify for Worlds. Our team members are: Michaela (me), I am an Engineering Notebook designer and sometimes help build, my Hobbies are Soccer & Volleyball. Kalina, she is also an Engineering notebook designer as well as a Part Manager, she enjoys Cooking & Reptiles. Peyton, he is an Builder as well as a Driver, he's interested in Baseball & Video Games. Sahej is our main and only Programmer as well as a Driver, he likes to play Basketball & American Football. Logan's part on our team is a Driver, hes Hobbies are American Football & Lacrosse. Trey, he is an Builder, he also enjoys American Football & Basketball. Our team as many differences, but that won't stop us to reach our goal.

Sahej

# Girl power

When I think of the phrase “Girl Power,” I think of a group a team fighting for something important, teamwork, and conquering a problem. This helps improve our team in many ways. For example, our team works together in many things, like building our robot and including every ones ideas. Our team is also working hard to try and make it to worlds which is important to us. When we face a problem we try many things to get it to work by working together to overcome the problem. Even though we all think differently, we still try to work together.

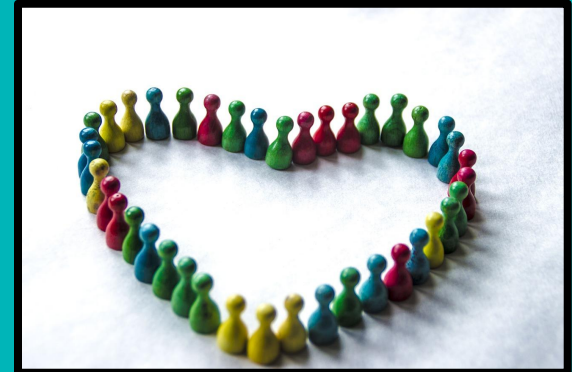

I BELIEVE IN THE  
**POWER OF  
WOMEN**

LWV

# Taking initiative

Our team takes initiative to create a more inclusive environment by seeing everybody perspectives and similarities with one another. When our team first came together nobody knew each other which caused problems of us falling behind other teams in our class. We overcame these problems by talking about the things our robots should have. When we talked to each other, we discovered that a lot of us had the same idea and we got to know each other. Our problem with each other began to fade away and we were able to focus on our actual problem.

# Various roles in our team

Our team does take multiple parts based on what they want, as well as what they are best at. For example, Logan is our driver and builder. Sahej is our driver, programmer, and a builder. Peyton and Trey is our builder. Kalina is our part manager, notebook person, and she gives ideas to our builders. I help work with the engineering notebook as well as a builder. We learn many thing from our experiences in our positions. Like, a lot of our teammates learned what positions they are most useful to the team, and when all of us tried different spots we figured out who should be that specific role. When we all work together, we were able to finish our robot, so by seeing everybody's skill we also learned more about each other.

# Diversity of 74177X

I Believe that diversity does change our robot, teamwork, and our ability to succeed in many way especially positive ways. Diversity changes our robot because we all think differently, sometimes one group agrees on something, while the other group disagree or its the other way around. Even though we all think differently we will come to a compromise and work together. It can also change our teamwork skills because we can argue sometimes about decions we do on the robot, which affects our teamwork. Our chances to succeed increases because since our team all have different perspectives we can all give each other ideas on what to do or how to fix our robot which would give us a better chance at winning.

# ROLE MODEL

The influence of  
a good teacher  
can never be  
ERASED

## My role model

My role model is my teacher Ms. Egbert because she inspires our whole class to work hard and finish our robot. Ms. Egbert is my role model because she works hard to schedule competitions, while helping us in class, and sometimes even host competitions. She shows compassion, in what she likes doing as a job coming in early and staying late to let her students work on there robots after school. She is an inspiration because she just doesn't teach 6th grade she teaches 6th through 12th, which takes a lot of effort in helping all of her students, but she still does. She inspires me to be a better teammate in my team because she works hard when times get tuff, works well with others and shows compassion in what she does.
