Robot Building Formula

If $t_1 =$  And $d = \text{time} :$

In this photo, the formula for term "n" in an arithmetic sequences is remixed to portray the process people would encounter when building a robot. "d" denotes the time spent on robotics, "T1" represents parts, so "Tn" is the final result, a robot.

$t_n = t_1 + (n-1)d$
More time by the way
ROBOT
