STEM School

- We notice that some schools have begun to follow the STEM methodology and our school is one of them. It has followed this scientific methodology with students in the study who has a special interest in mathematics and how to communicate information to students, so mathematics with robotics design was a great mixture to apply engineering concepts in a practical way, such as the theory of gear ratio. And how to provide speed or torque, she clarified mathematics with that theory, which became attractive to us as students in explaining and benefiting from the STEM methodology and the intervention of Robot VEX to make the subject more interesting.
