Kingdom**

When designing our poster the first thing we considered were the rules and technical details. Then we all agreed that we wanted our poster to highlight the main reasons we love participating in VEX robotics and what it means to us. We refined the text over time but eventually settled on these for different reasons. The first one conveys part of our design process which is a really important aspect of VEX robotics. The second part shares one of the best parts about robotics, going to regional, national and international competitions. Having the chance to be inspired by other people's ideas as well as meeting people who all share a common interest is one of the best things about VEX robotics. Thirdly, we wanted to feature some of the skills we've all developed since we started robotics, not only engineering skills but also skills like collaboration. And lastly, participating in VEX robotics has sparked an interest in engineering careers for many of us as the processes we apply are similar to those that professionals use.

Overall, the text and the pictures aim to highlight what the best aspects of VEX robotics are to us and encourage everyone to get involved in this amazing programme!
