You and your sibling have been assigned to complete chores and based on how well you do, you get paid for them. Due to your intense rivalry, you both have the competitive spirit and want to earn more than the other.

To start off, we have to introduce the field.

The field itself turns into a kitchen.

The high goals become dishwashers.

The low goals are simply the floor.

The rollers are washing machine dials.

The discs are the plates that need to be washed and put in the dishwasher.

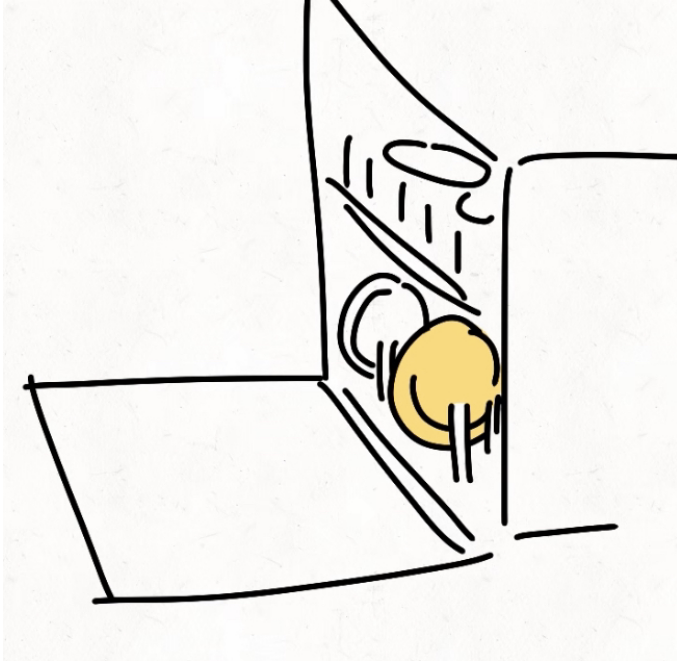

In the first 15 minutes (15 seconds of the game), we have the autonomous period where each person has to stick to their side and follow the tasks that were prepared for them in advance. At this time they cannot cross over to their siblings' side and do chores there.

After that we have 1 hour 15 minutes (1 minute 45 seconds) for the driver controlled period where each person is now allowed to go over to the other side and complete tasks there. This includes turning on washing machines on their side.

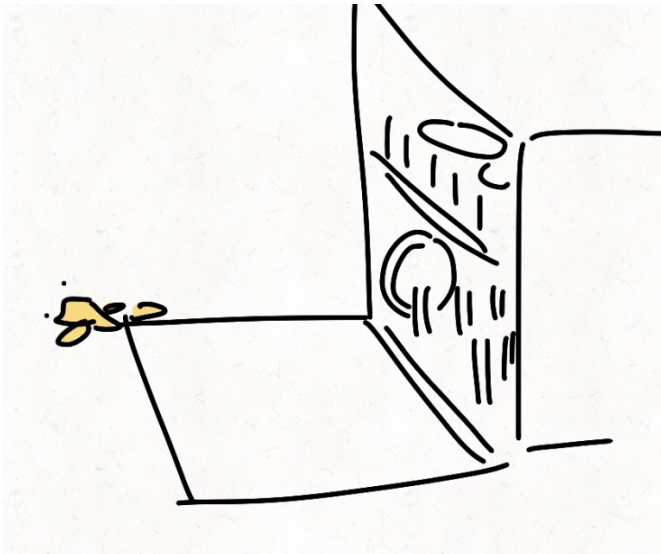

In the last 15 minutes (15 seconds), it's a mopping showdown. Whoever cleans more tiles gets more money.

The amount each person earns from doing each chore is as follows:

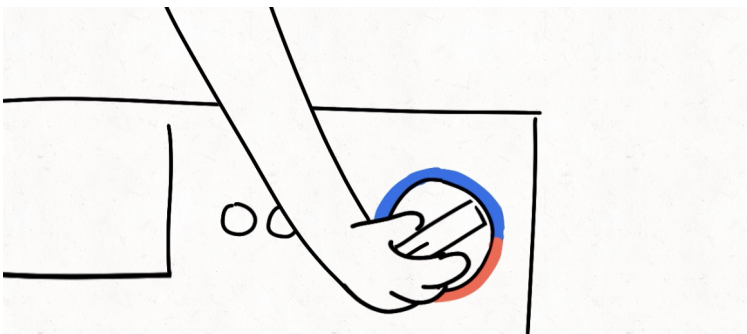

Putting a plate in the dishwasher (disc in the high goal) - \$5

Cracking a plate on the floor (disc is opposite alliances low goal) - \$1 for opposer

Turning on a washing machine (turning the roller to your teams color) - \$10

Each tile mopped (endgame expansion) - \$3 each tile

Remember some rules during this competition such as do not engage in any mop fights (entanglement) and you can't hold more than 3 plates at a time to put in the dishwasher.

And of course whoever has the most money by the end of the 2 hour period wins!

Script:

You and your sibling are both competing against each other in an attempt to complete the most chores in 2 hours and become rich.

For every task you complete properly and within time, you get money for them. Yes I know, so exciting.

This will take place in a kitchen area where there are two dishwashers on opposite corners and washing machines on each of the four sides.

To start off with the basics, you need to do the dishes! For every plate you wash and put in the dishwasher, that gets you \$5. Seems easy enough right? However if you drop the plate and it ends up cracked on the floor instead. Well... that gives your sibling a \$1. Not so great.

A higher paying chore that is worth \$10 which also needs to be completed is turning on the washing machine. Make sure to turn it to the correct setting or spin cycle that you use so that it's

clearly evident you're the one who did it. But be careful! Your sibling can change the dial to their setting before time's up so make sure to keep checking and switching it if necessary.

In the first 15 minutes or the autonomous period, you can only do your assigned chores in the order they were told to be completed and cannot interfere with your siblings' so just stick to your side of the kitchen. If you end up making more money during this time then you get an additional \$10!

After that for the next hr and 45 minutes or the driver controlled period you are free to steal tasks from your sibling and earn their money as well, but they can do the same so watch out.

And finally in the last 10 minutes, you have an opportunity to earn as much money as you can by mopping! For each tile you clean you can earn \$3! Even if your sibling cleaned some of the tile, you can still get money for it. But make sure you clean it yourself and not hand the task off to some parent to do. The mop must be in your hands at all times!

And that's about it! Play nice and have fun in the battle of chores against your sibling!
