

UAA Robotics Poster Design Challenge:
Inspiring a Generational Love of Robotics

Team ICE1 in Anchorage, Alaska

Created By: Ramiro

Description

This poster is inspired by the impact that VEX has on Robotics over many generations. The poster depicts two young children playing with a simple box robot, moving onto building with VEX robots when they are older, and finally becoming robotics professionals when they are adults. It is meant to show that starting youth off early with robotics inspires them to continue their involvement with STEM and robotics into their career. They have the opportunity to really impact the future. We hope to inspire students to become involved with VEX robotics because it not only is fun and engaging in the short term, but it can also set a path to a rewarding career in STEM.

Design Process

Below is the initial sketch of the poster:

After that colors were added to create this final design:
