Roscomare Road Elementary, Los Angeles, CA

# Our Role Model: Amelia Earhart

Amelia Earhart is an amazing woman who inspired girls all around the world. She worked on many different airplanes. At that time it was unheard of to have a girl work on something that normally "a boy would do".

Amelia Earhart was the very first woman to go overseas! She was bold enough to go overseas in a small red airplane all by herself. She helped a lot of girls aspire to their dreams. It was a big step for women at the time. The thing I admire the most about Amelia Earhart is how she ignored all of the people who said she couldn't do it. She proved them all wrong.

# Get to know our team!

Mason

Loves to ski and plays video games.

Sophia

Has many hobbies and loves playing piano.

Emily

Has 6 pets and likes to do track and field.

Minghan

Is our lead builder and our team leader.

Adam

Likes building appliances and cool extensions for our robots

Leo

Is an All-Star soccer player and takes his soccer games very seriously.

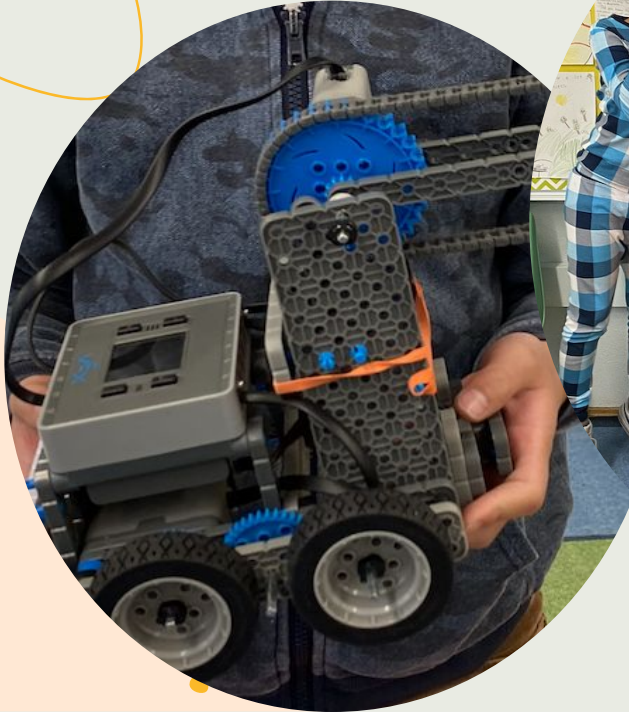

D.D.

Loves to act and sing. She was one of the stars in our school's Mary Poppins play.

# Our Robot Evolutions

## Current Robot

Our first evolution

Pajama day!

# Diversity

We are a pretty diverse group of girls. For example, Emily is Chinese American, Sophia is American Iranian and Jewish, and D.D. is Christian and American.

If another person would have joined our group, it wouldn't matter what race, color, or religion they were. We would welcome them with open arms, explain our strategies and introduce them to everyone on the team.

# What Girl Power Means to us.

Girl power shouldn't just be some phrase that describes a girl who did something cool or something that supposedly "a boy would do." It should be a compliment. Let's say that you tell a girl: "Girl power!" That would technically be saying that you support and believe in them so much that you decided to say "Girl Power"..

"When you say girl power what comes to your mind?" When we say Girl Power, what comes to mind are our very own role models incredible scientists or engineers! When we hear girl power we think of how much things have changed over time and how far women have come. We support girl power in every way we can!

# Jobs

Our jobs are...

Sophia

I personally design and drive. I love to do these things with my teammates. They are so supportive and I love to work together!

Emily

I drive and help fix things. I also helped very thoroughly to make this slideshow.

D.D.

I draw and drive. It is a huge experience for me. I also fix a lot of the broken things! I also have huge constructive criticism. Lots of twists and turns around every point!

What We Have All learned...

In this experience we have all learned that teamwork is the key. Whether it is with or own teammates or with another school's team. Even if we fail miserably, the other team will succeed. Teamwork is everything!!!!!!!

# The Boys.

I know this slideshow is supposed to be about the girls, but we don't think we are better than the boys. We believe everyone should be equal. For example, take Minghan G. Over Winter break, he took our robot home and made it a beast! It was one of the best robots we have ever had! Half of our victories we owe to him.

---

# Our Game Strategy

The person who goes first during the round will try to get both of the blue dispensers. If the person takes too long on the blue, then she/he would switch to getting the purple or yellow dispenser.

The second person will get the purple dispenser.. If the other team or the first person has already gotten the purple dispenser, then then the second person will push disks.

With any extra time, we try our best to push all of the remaining disks to the other side. That is our strategy for the competitions.

# Thank You Vex IQ!!!
