

ROBOTICS

The map shows the ups and downs of joining a VEX Robotics team. Robotics is a very dedication based sport, as the main thing you need to succeed is time to work on your robot and practice driving it. It is also a very educational sport, and experience in a world where robotics are very quickly growing in use and practicality in the real world is very important. Robotics is also very fun! You will most likely make many new friends and stick with them throughout life as they share common interests. But there are also lots of challenges you will face. Some of those challenges can be bugs in the programming software, plus, not lining up the robot correctly, and occasionally a big problem is some people not committing to the sport and the team. Even with all of these challenges, robotics is still going to make a difference in people's lives and change the world to be a better place.
