

4-bar lift flystick

By- Caleb M, Matthew P, Matthew G, Samuel H, and Oliver F.

Team 81101D

Mankato, MN

What is our photo about

Are photo is supposed to show are 4 bar lift and and high up it goes it gives a huge advantage in our team which a whole robot is all about being ahead of the competition

What does object in the photo do

Our 4 bar lift helps raise the flystick so it's easier for the tri-balls to launch over and it also acts as a blocker because we took the knowledge from previous tournaments and saw how most of the robot could be pretty easily blocked so we added this to give us a blocker

Why is this photo show what is different about the team and robot then other teams

we think this photo show our 4 bar lift that we have only seen on high school teams and we see them very rarely this also how our team is **here to win** and how passionate we are about Vex and the competition in general
