To start, our team was so excited to create a poster expressing our gratitude for VEX VRC Robotics. Our poster spotlights the innovation and essential values of the Vex VRC Robotics program that will carry the next generation in achieving great things in our community and our world. This program generates ambition for students to break down barriers, a safe and welcoming community that the students can feel safe and welcomed in, problem solving skills, and an open mindset to new ideas and beliefs. Our poster features a globe with hands symbolizing that the students of VEX VRC will carry the world into a bright future, from their problem solving abilities that have been engraved into them by the engineering design process. In addition, our poster also highlights the fun and exciting parts of VEX VRC, describing VEX VRC competitions and how they are the foundation for long lasting respect and friendships with the students no matter where they are from. Finally, our poster shows how every student has an opportunity to give back to their community by volunteering for competitions or robotics events, and even solving problems they see in their community by using the engineering design process.

The design process of our poster included "Easter eggs" that have deep meanings and inspirations. This was significant because VEX VRC has powerful embedded values that might be overlooked by a naked eye. The color of our poster, purple, represents a wide variety of things but most notably, ambition. This is what all participants of VEX VRC have in common because they are always driven towards a certain goal. Furthermore, our poster showcases a staircase with people helping each other towards the top to emphasize that VEX VRC builds a community filled with love and respect. Finally, we highlighted the innovation in VEX VRC by making a robotic symbol blue, since blue shows innovation.
