

HC Vex Poster Design Online Challenge

OUR INFORMATION

Location:

**We are located in Harbor
Creek, Pennsylvania**

Team Number:

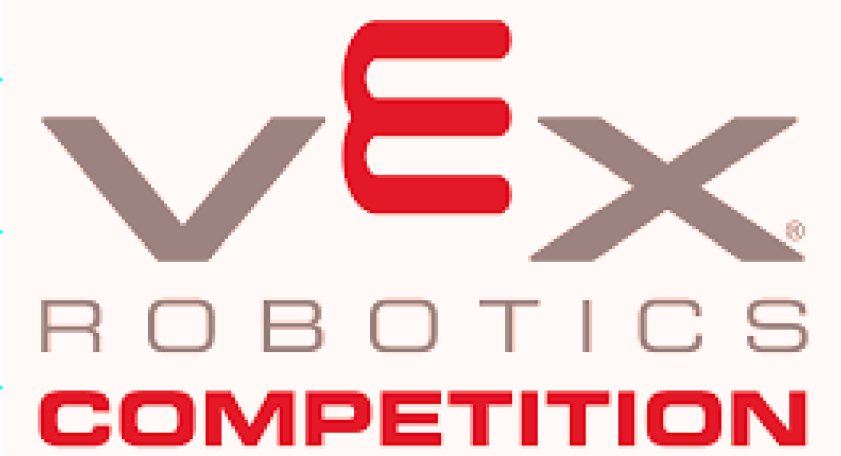

56238A

Created by:

**Ottavia Fouts and
Sadie Lander**

01 What is Vex?

Vex Robotics is a program for elementary through university students. While at vex, teams design, build, and program robots to compete at competitions.

02 About the game

The game is played on a 12x12 square field with four robots: two for each team. Each year, the game has challenges that students need to build and program their robots to overcome.

03 How do I get involved?

Schools all over the country can participate in Vex Robotics. Your school doesn't have to have a lot of people, you can have a small group and still be successful! Grants could also be available to schools that participate in Vex, and if you are not a student, you may still donate or sponsor a team.

How did we make this?

- We designed this poster on Canva**
- We used free templates and demographics and removed every watermark from each graphic**
- For our collage, we took game pieces from the last ten games and put them into the app Collageable**
