Planning

I started by thinking of my colour scheme and which colours would represent VEX the best. I didn't want to go with just black and white so I went with the colours on the logo, black and red. I wanted to make this poster simple so I decided on going with minimal pictures. I also wanted to have a falling gear picture. Finally, I wanted to have quick access for people to get to the VEX website so I wanted to add a QR code.

Setup

I started by making the falling gear picture. I used sprockets for this because the gear teeth were too unnoticeable. I took some pictures of sprockets, from the digital parts provided for us for our engineering notebooks, and put them into PicCollage where I could alter them to how I liked them. I then found a VEX logo. Finally, I made a QR code for VEX.

Putting it all together

On Procreate, I first put the VEX logo in and made the background black. I then put my falling gears at the bottom of the poster. I then made a maroon gradient and placed in my QR code. I put a small message next to my QR code directing people to it. I put what I consider the cycle of robotics in. I added some big text reading "JOIN VEX ROBOTICS". Finally, I took a screenshot of the poster, put it in a new drawing on Procreate and made a border around it.
