Valeria S. Valderrama Pantoja

Ready to begin?... The cycle starts again!

The team 2263X designed and created a poster that will inspire others to join the VEX Robotics programs. This poster has a cycle of the general steps followed in robotics discipline. Four of the colors used for the cycle steps circles represent science, technology, engineering and mathematics (STEM). Some photos were included in the cycle to make reference of the steps. The photos have a border of a gear that makes reference to the creating stage of the cycle. To add some decorative details, digital circuits designs were added on the edges. It includes a final question for once the reader finishes analyzing the cycle: *Ready to begin?* The team also decided to include VEX Robotics and REC Foundation logos.

At the bottom of the page, the link of VEX Robotics Web page and its QR code were included in case the readers want to look for more information. In order to create this poster, the team members dialogued what it should represent and include, and how it could be done. Once it was decided, three different posters were made. Finally, the team chose one of them, improved it and gave it a tittle.
