

Team Magic!

We are two brothers that created a vex Iq team. Each member plays a very big role in the team, for example, I built the robot and my brother coded the robot when I was sick. Without each other, we could only drive for 35 seconds at each match. In the photo, each group of pieces represents a part of the engineering design process. We struggled a lot during the process and learned a lot through the struggles. Some of the pieces in the photo look like fireworks, the fireworks represent the team magic we have created. Our robotics experience has been a struggle and also a magical experience.
