## Brief Description of Poster

We wanted to express the demand of engineering, construction, and other associated jobs by showing that when doing VEX Robotics we, as a middle school team, are the future of tomorrow when it comes to technology, engineering, construction, and other. To also get people who may be interested to get involved with VEX and work towards a future that helps to evolve tomorrow. Our poster also shows how even small starts, such as VEX, can go a long way, if you continue down the path of engineering, construction, technology, etc.
