

# DESCRIPTION

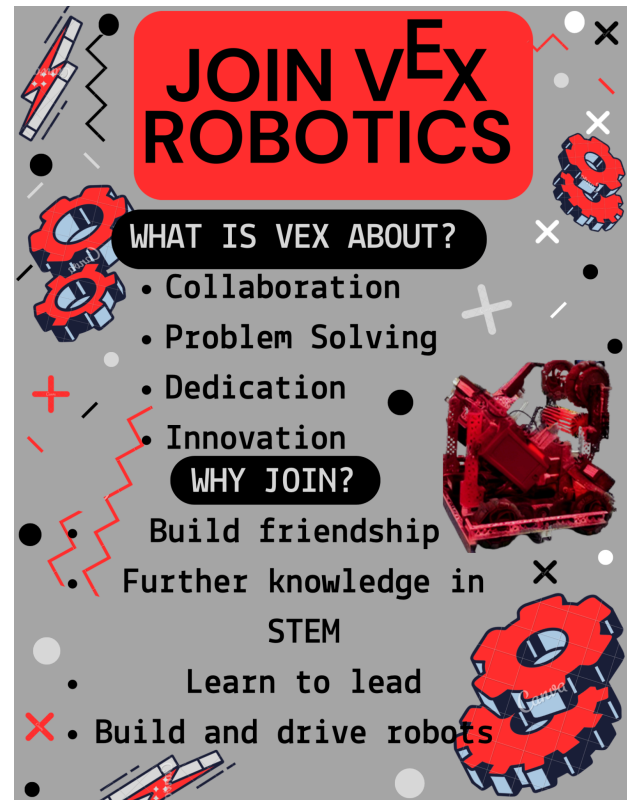

## DRAFT >

Our design focuses on both what Vex robotics is about and what the benefits are of joining. Our goal was to create an enticing, short and simple poster that was both eye catching and informative. Our initial draft was a little bit chaotic and messy. So after redoing some formatting and adding the design process, We came out with the final design. We decided to use the same color scheme as vex robotics in order to accurately represent the vex logo. We also incorporated images such as the gears to add visual appeal and stick to the typical “robotics” feel. However, we also

incorporated our bot from this year's games because it more specifically describes what vex members are capable of. Finally, we decided to end the poster with a point saying that you can “build and drive robots” which is fun and catchy and at the end of the day, is what we think robotics is all about, having fun and learning.

But what makes vex robotics unique? Well, participating in Vex can transform typical learning into hands-on interactive experimentation learning. Furthermore, Vex teaches you to learn to be a team and work together towards a common goal while still having your particular special field. What we mean is, while you're all working together, you still can have specific responsibilities such as a primary driver, builder, and coder depending on what your strengths are. Vex allows you to both excel in your strengths and develop your weaknesses.

Something Vex does really well is allowing you to fail and try again. This is an important lesson that is difficult to teach in a regular classroom, especially without

guidance. Finally, Vex is a worldwide program that has a global community that is connected and interactive. Vex gives you opportunities to explore yourself and what your interests are. Because Vex is so well known, it opens doors for future networking and career development. In conclusion, this poster accurately creates a brief description of what being a part of Vex means.
