

Career Online Challenge  
Hewes middle school  
Team 8929C

*The career I chose is mechanical engineering. I have chosen this job because I have experience with power producing machines and it's a job I'll love to have. I have been studying this job at the websites [bls.gov](https://www.bls.gov) and [mtu.edu](https://www.mtu.edu). Mechanical engineering is a lot of things. They design, develop, build, and test mechanical devices. They have 5 steps to follow." Find the problem(1), make the concept into visual media(2). Preliminary design(3), make the prototype(4), communication design(5). My team against Mechanical engineers are not too different as they had many more years of experience. I build robots for my robotics team and soon hope to build other things too! I was thankful for doing robotics because it gave me practice for my future job. Building robots helped me prepare myself for my future career.*
