

Title of Submission: Wonderful World of Robotics

Name of Student: **Emaryllia Gafur**

Team number: **1102P**

Location of team: **West Vancouver, British Columbia, Canada**

Do you like Lego and video games? If the answer is YES, you would love robotics. It is exciting, creative and fun! It is also intertwined very closely with our lives. It helps us in many ways. We produce energy by using wind (natural resources) and engineering (wind turbine). We create beautiful architectures such as the pyramids in Egypt and the Eiffel Tower in France. We also discover unknown places like the moon with rockets and have a super communication system through satellites. We are making the world better with robotics. The possibilities are endless. We will always be victorious, together. Join us!
