AKASH GUNTAMADUGU AND NATHAN YEE
GAEL FORCE ROBOTICS - DUBLIN HIGH SCHOOL

DESIGN

We began working toward our poster by first identifying a theme. By incorporating a predominantly black and red theme, our centerpiece would have a greater contrast with the background, allowing the poster as a whole to be more eye-catching. Using neon red text and red elements, this theme was upheld while the text could easily draw attention. We also decided to add dark gray gears that blend in with a background to keep the background dark and to introduce the target audience to some fundamental parts of VEX Robotics. We also used the VEX and REC Foundation Logo and a QR Code directing to the vex website for easier access among the target audience.

PRODUCT

For our final design, we used Canva to edit and make changes to our poster as well as write the poster description due to its plethora of useful features.

This poster is meant to send the message that robotics is a program that fosters creativity, analytical thinking, problem-solving, and other valuable skills in the minds of the coming youth. As such, we can prepare the next generation to be well-educated and leaders in their communities, shaping the world into a better place.
