Synergizing Success: Elementary and Middle School Robotics Teams Unite in Remarkable Teamwork

We are the CODE-A-ROBOT Team 2633B from Weston, FL.

Our club is a tightly-knit family, our elementary team and middle school team work together, we always feel that we can ask for help and support from our middle school team.

We want to be like them and learn everything they already know!

We are also celebrating our achievements together.

In our turn we are also helping younger students which are just starting learning robotics in our community.

In this photograph we are together with them and we celebrate our awards, the Robot Skills 3rd Place and Judges Award we received at our last competition!

We feel proud that we were able to share our wins with them!
