Every student who has competed in Vex Robotics across any level knows the work that goes into the excitement before a match or skills run begins. This photo was taken before our team's final programming skills challenge at a competition. After late nights all week, the first moves as the 1 minute timer started counting down can be the scariest. Before the run, we knew we had put the work in. We brainstormed, we learned, we researched and finally we succeeded in a perfect run. Our work paid off as both our hardware and software worked in perfect harmony.
