

- Team 6485K
- To create our poster, we decided to use Procreate using an iPad. Two of our team members, Maggie and Ruby, love to draw and were already familiar with the program. One even has made animations! We knew we wanted to include some of the things we use in VEX all the time. The journal, controller, brain, and beams are constants in VEX, but the field pieces are new, and we love how the game changes and challenges the teams every year, so we just had to include them too. We added words that we think of when we describe VEX to other people. We also thought about how it called to us when we were presented with the opportunity to join the team, which led us to our title.
