COAST 2 COAST
ROBOTICS

In our poster, we really wanted to highlight 3 main things about vex robotics. The first and foremost, was the design process, which is one of the most integral parts of the competition. As the guide all roboteers should follow in their endeavors in this challenge, we made sure to highlight it in the poster to represent this principal part of VEX. The second thing we wanted to highlight in our poster was technology and the future. There is no doubt that our world is only becoming more and more technologically advanced, as we progress further into the future. Although we may not yet have flying cars, the prospective engineers today, some of which will be competing in Vex, will be the ones to make these dreams into a reality. We wanted to showcase the future of robotics through Vex through our poster to help motivate people to take one leap into the future. Finally, we wanted to highlight the fun of Vex. Despite being a competition, and having a large focus on designing these robots, Vex is meant to be fun and something enjoyable. Vex shouldn't be remembered as something people spent cramming their nights in, but something that they had enjoyed participating in. It is through the enjoyment of competition that motivates people to compete in this competition, and make it so alluring. And thus, we wanted to include a picture of people having fun, because that is what really drives us to do this.
