

Like humans, gears come in all shapes, colours and sizes, however it's their unity that allows them to ultimately allow a mechanism to function. Just as you need two or more gears to work together and form a component, you need two or more people to work in harmony and in sync, for a team to function. We have chosen this image because we believe that gears really express the unity between all humans, and that their analogy is perfect for conveying the motto of our team - "United we stand, divided we fall". Lastly, no matter how different one gear is to another, they are ultimately the same part, just used for different purposes and put together in different ways. Just like that, no matter how different we are from one another, we are ultimately human and that is what allows us to bond as a team and move forward in VEX. It is what allows us to help each other in any problem they face because in the end we are all working towards the same goal and this is what we believe this photo represents.
